ABOUT US..

Explenet is a learning management software application that is used to administer, document, track, report on, and deliver educational courses, training programs, or learning and development programs. This application helps both students and working professionals improve their practical talents and find jobs in their key fields. It is used to construct courses and training portals by assigning faculties to the relevant courses.

VISION

- Helps both students and professionals in the work develop their practical skills.
- Explenet also offers LMS for businesses, enabling companies to access a collection of tailored training courses. Additionally, businesses can use LMS for Business to build unique learning portals for internal training.
- Explenet application enables the integration of physical lab infrastructure into the Explenet.
- Explenet promotes better utilization of resources from industry and academia through an unique strategy of resource sharing

KEY FEATURES

- ▶ Detailed dashboard view.
- ▶ Manage hybrid and online courses, categories, and course types.
- ▶ Set a deadline for enrollment to a course.
- ▶ View enrollment details as in student name enrolled courses.
- ▶ Create and automate assessment evaluations based on a specific category.
- ▶ View detailed reports.
- ▶ Book Lab Infrastructure to gain practical exposure.
- ▶ Create batches for enrolled students.
- ▶ Platform for providing feedback.

ROAD MAP

1

Product Launch

Competitor Research Update UI/UX
design Onboarding Clients Data
Accumulation

2

Data Accumulation

Data and Product Security
Updating Data accumulation
Betterment of UI/UX design

2

Data Analysis

Research on Data Analytics and AI.
Classification of courses Plagiarism checker

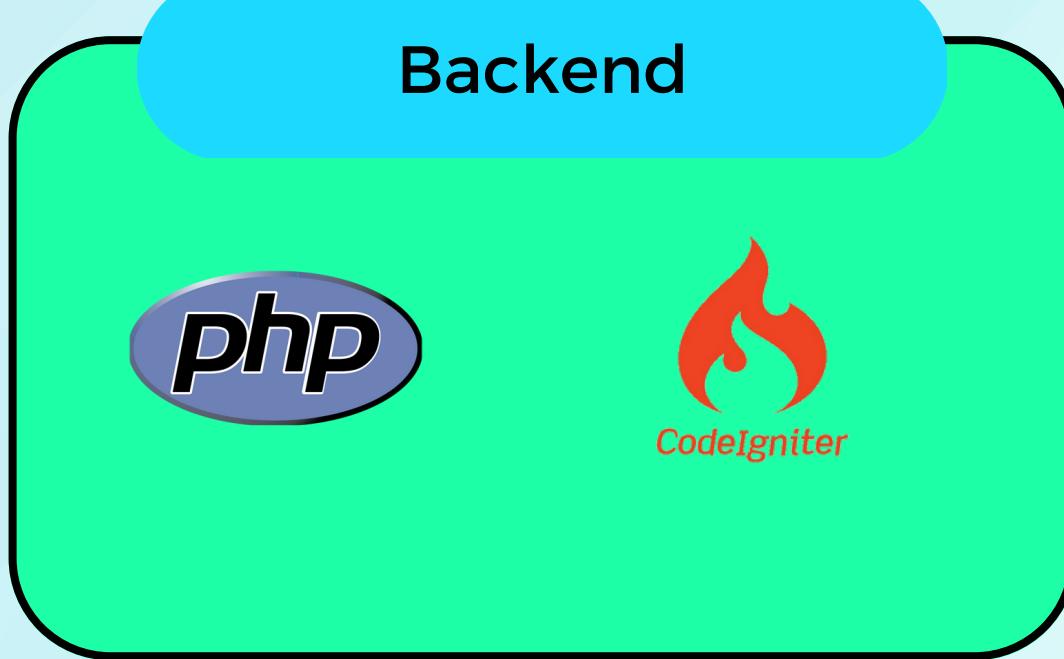

3

AI Implementation

AI integration and
Data analytics.

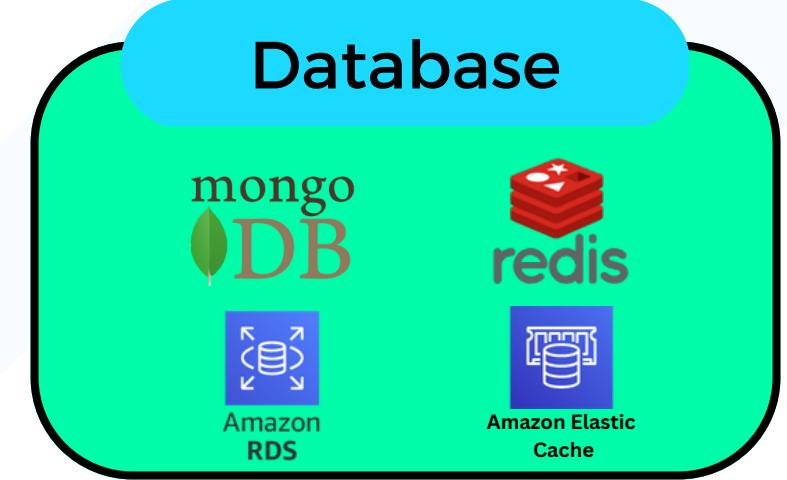

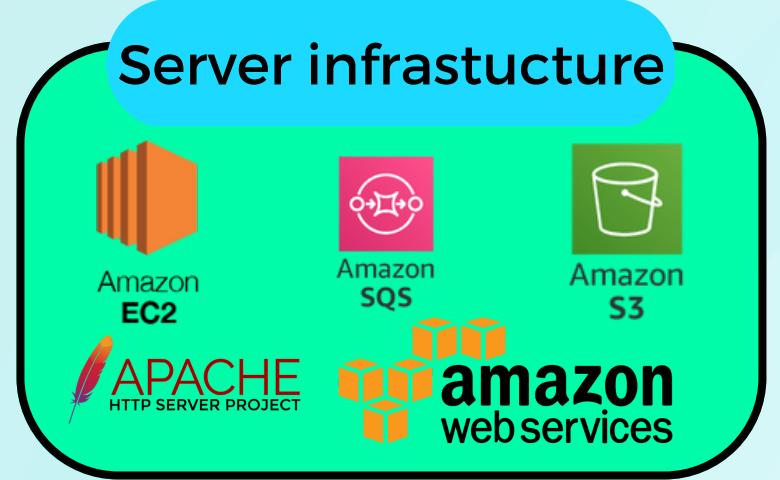

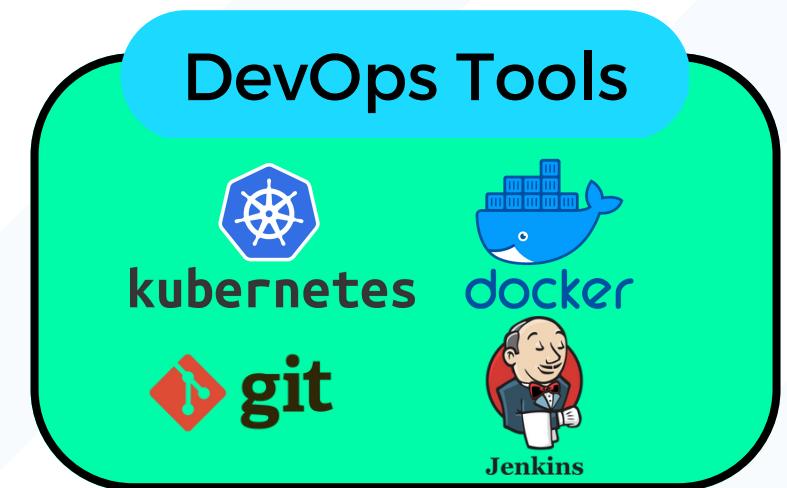

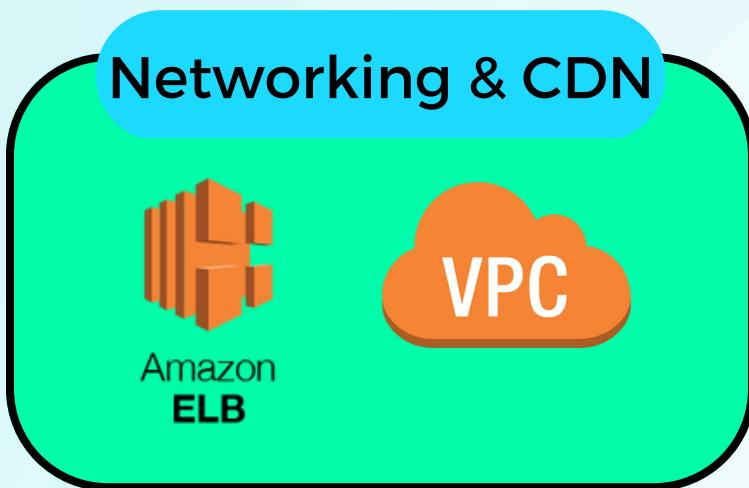

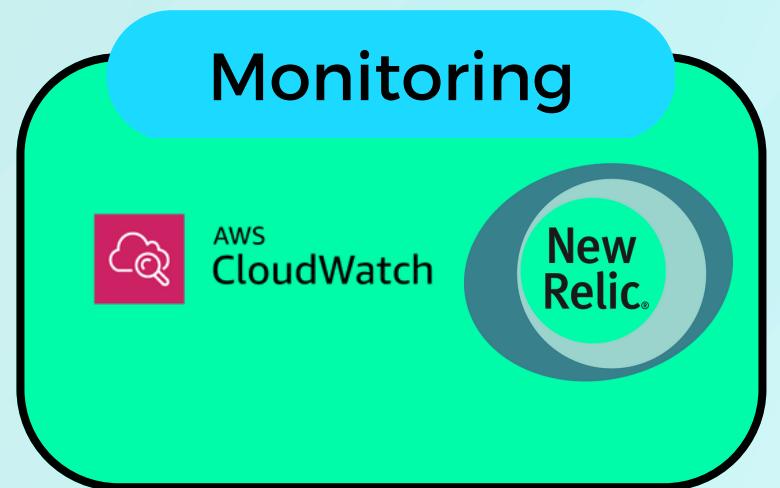

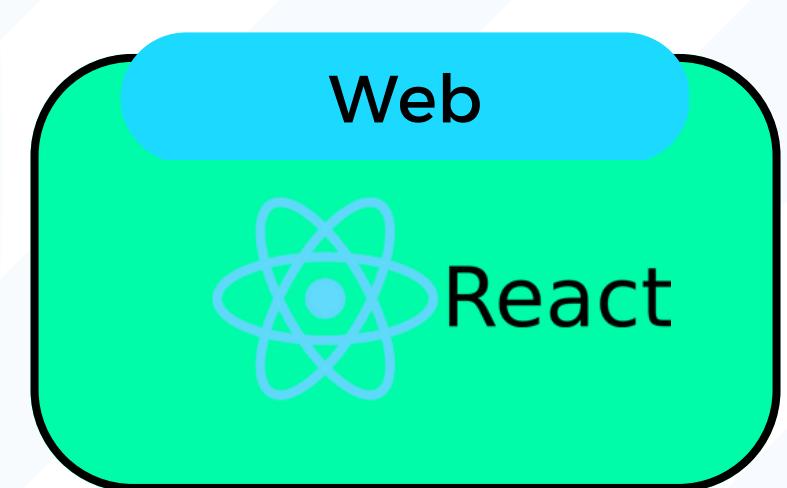

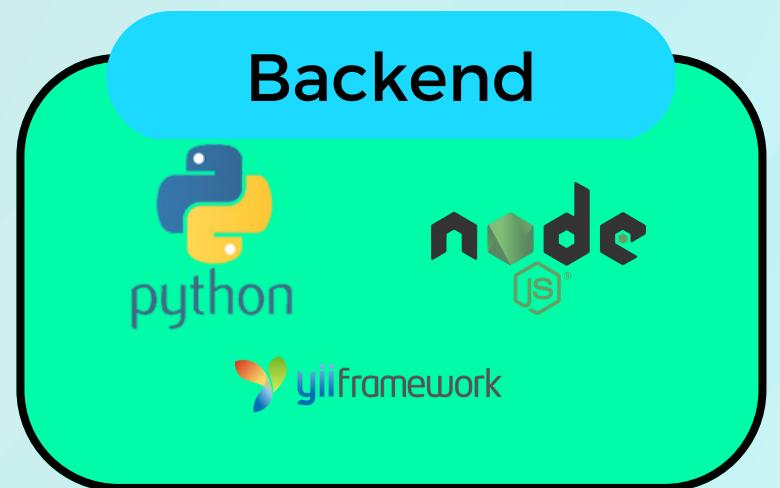

TECHNOLOGY STACK

- PRESENT

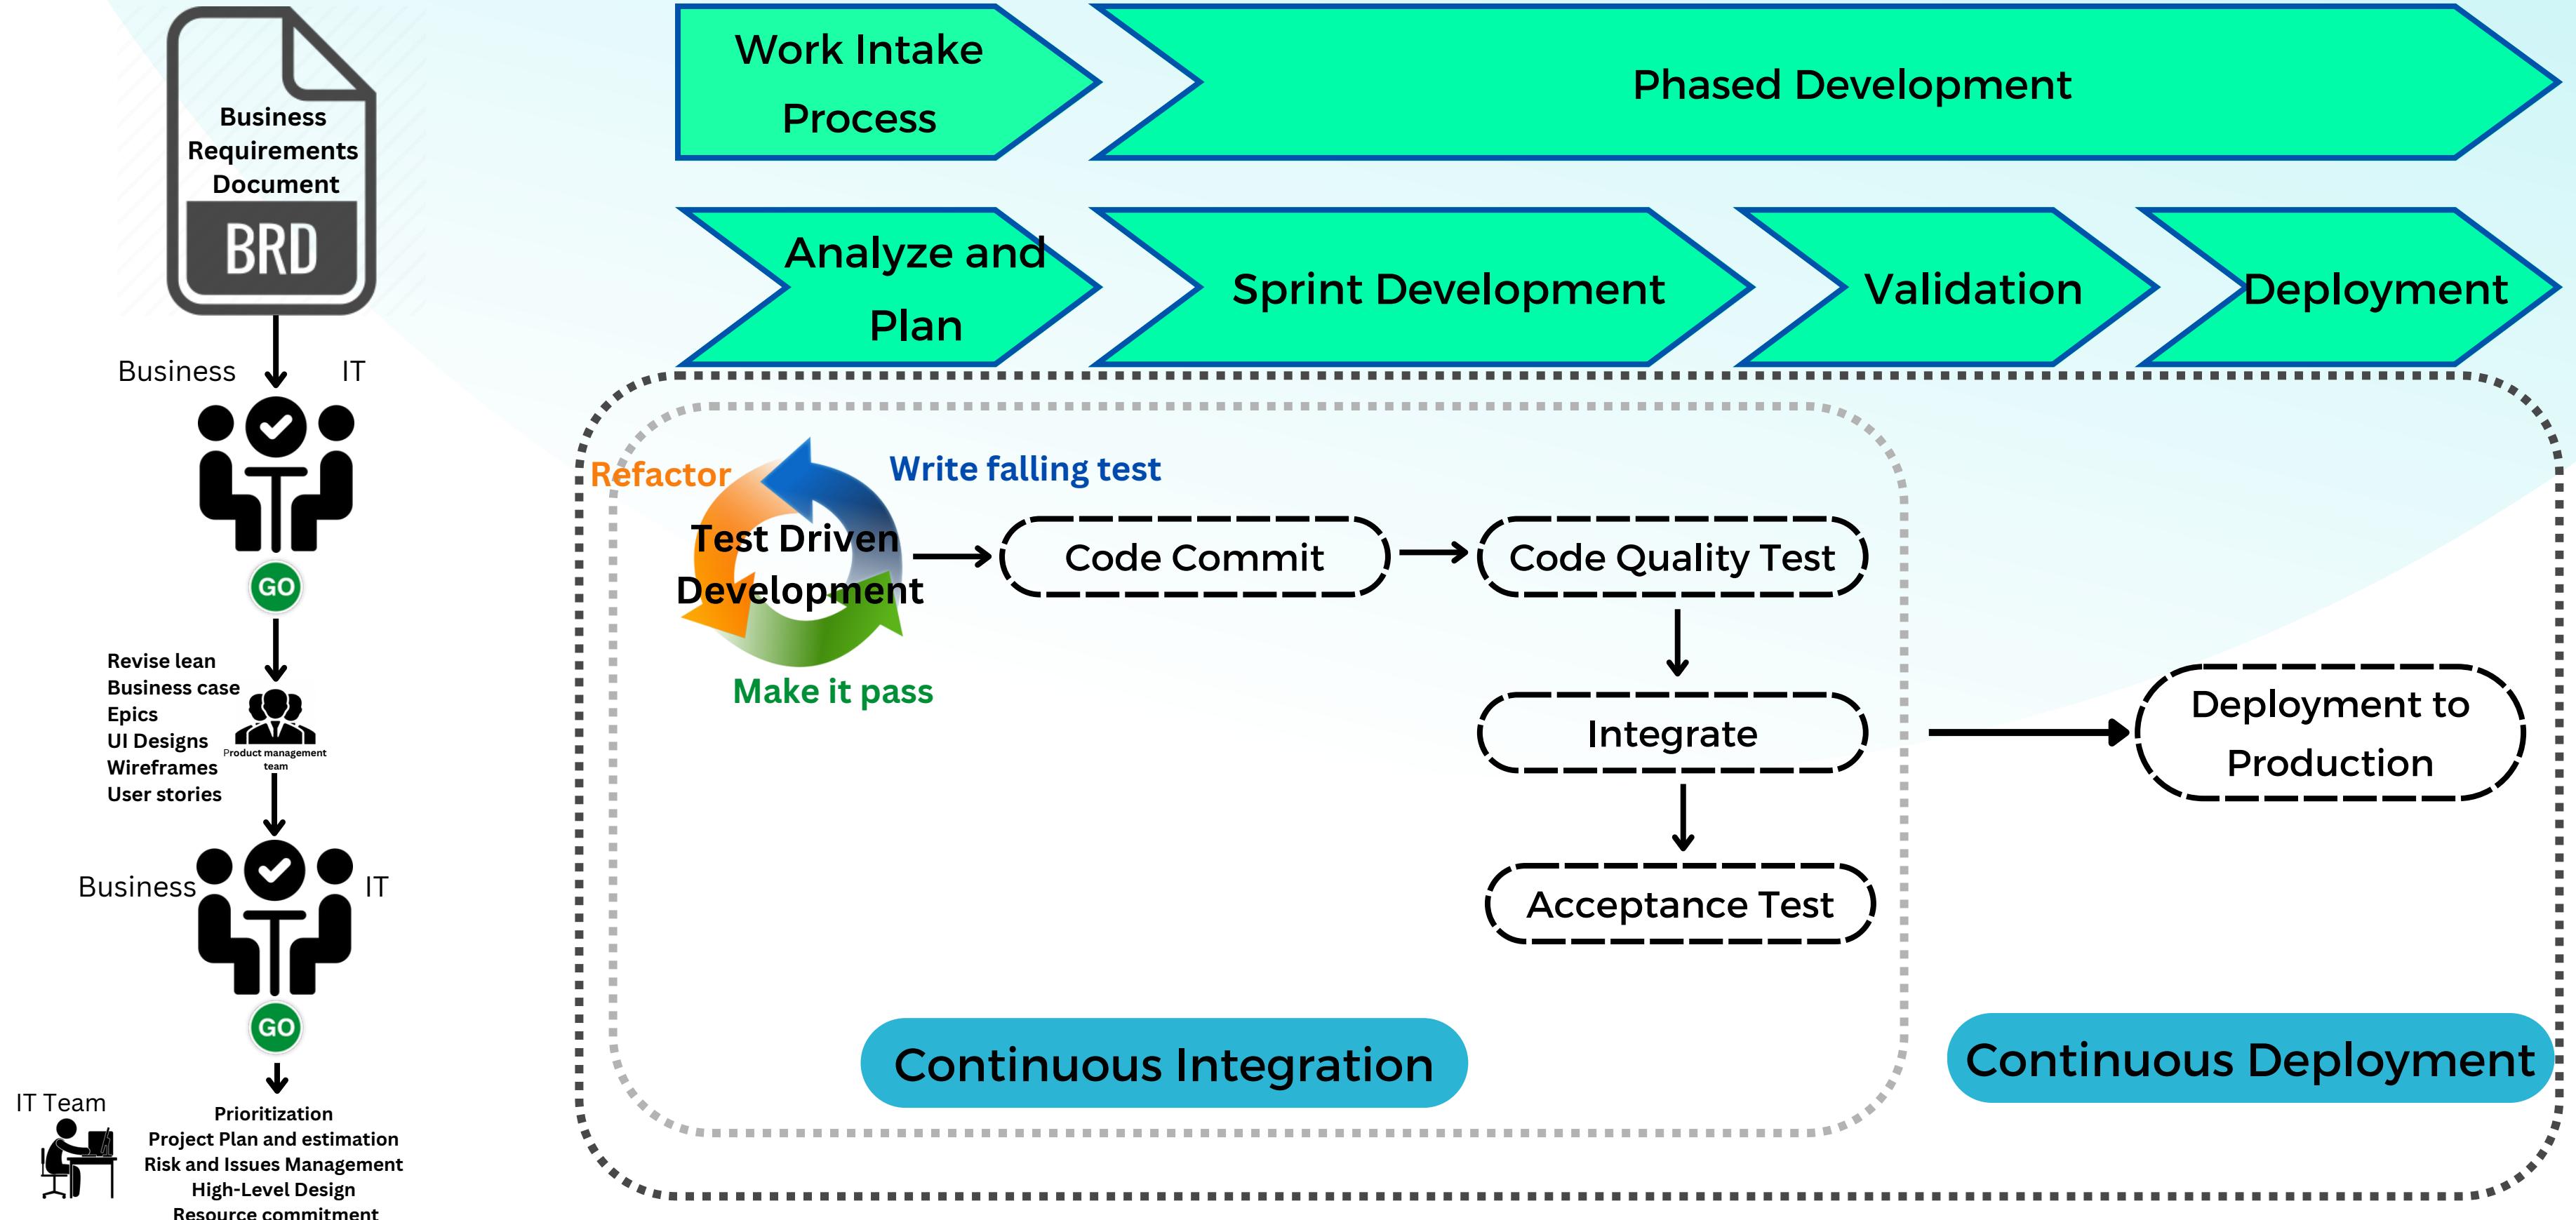

TECHNOLOGY STACK

- **FUTURE**

Implementing rigorous work intake process, test-driven development, and quality test to build a quality product

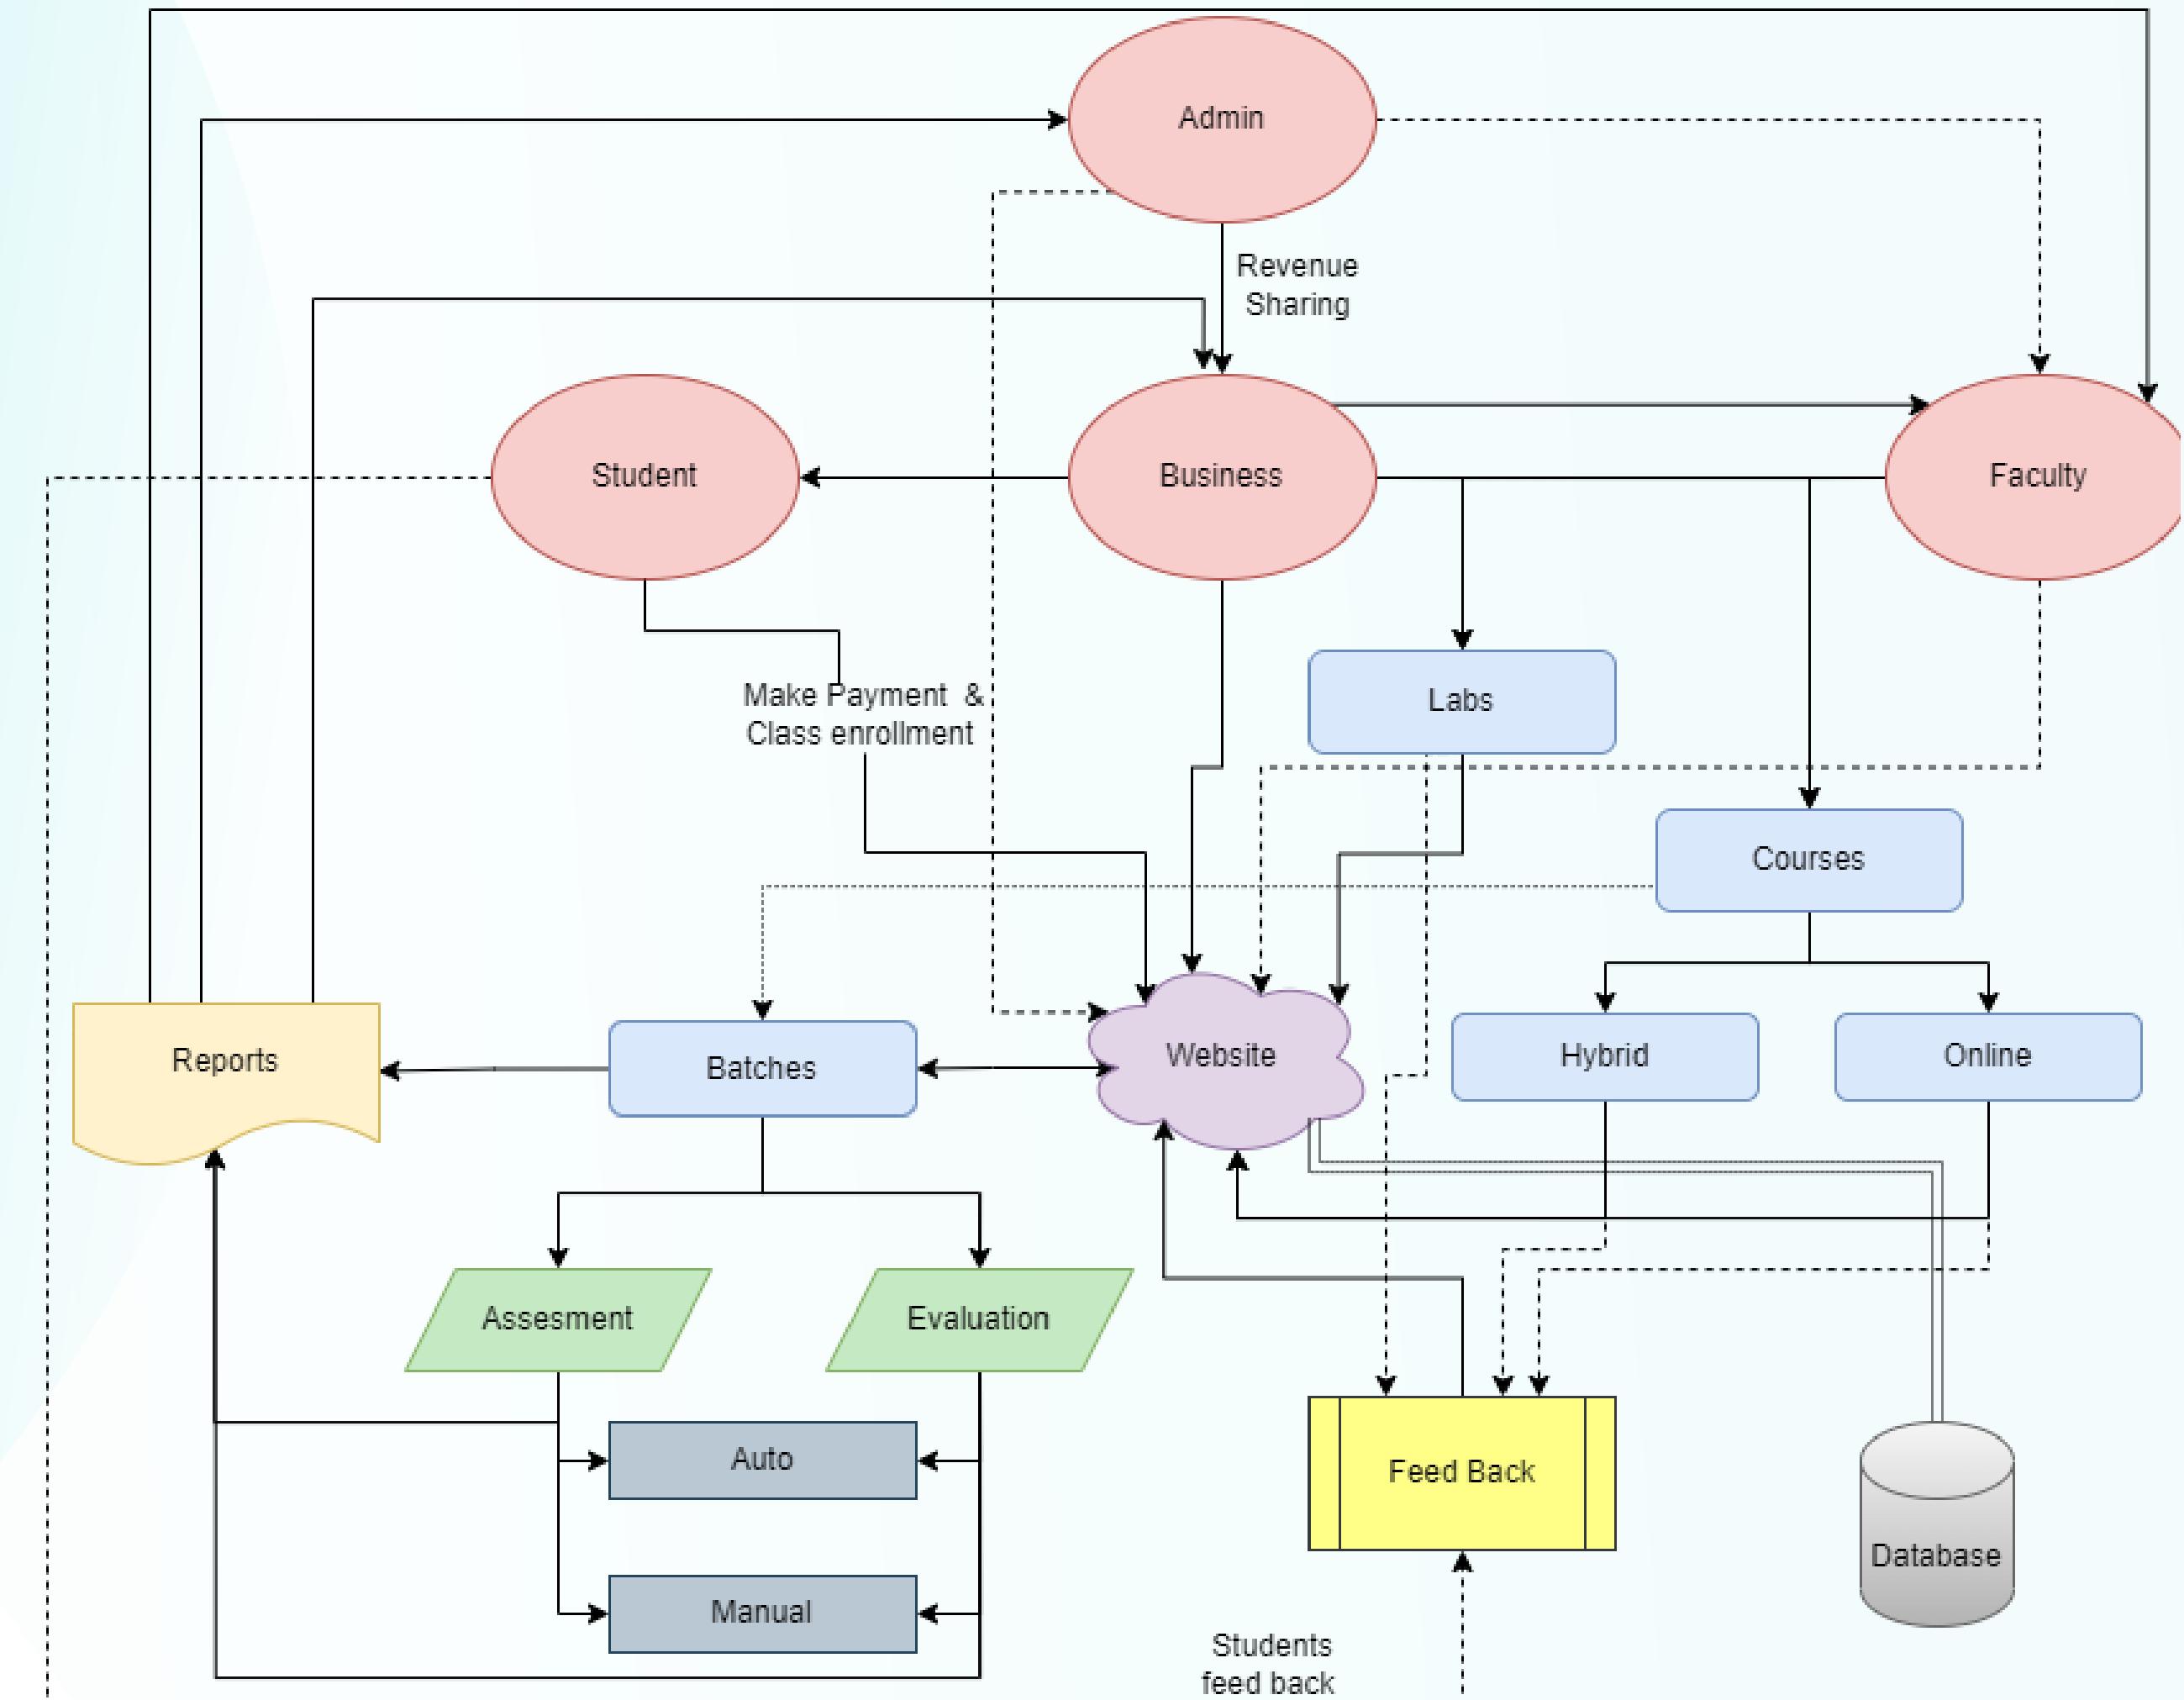

PRESENT FUNCTIONALITIES

- » Business Registration – Company/Institute
- » Sign-Up
- » Course Type- Private/Public
- » Labs
- » Category- Parent and child Category
- » Student learning Mode- Self-learning & Hybrid learning
- » Category- Parent and child Category
- » Batches – Hybrid and Manual Batches
- » Assessments – Auto and manual assessments

- » Evaluation- Auto and manual Evaluation
- » Feedback – For Faculty and course
- » Students – Add and Invite to course
- » Course Preview for students
- » Set deadline for enrolment of course
- » Assessment for individual students/ batches.
- » Reports – Attendance, Enrolment, Students, Assessments, Payments
- » Revenue sharing percentage option

Product Architecture

WHY EXPELENET

**Highly Scalable to integrate
multiple entities**

**Integration and utilization of
Infrastructure**

Hybrid & Self-learning courses

**Easy Management of Content
delivery to Students & Batches**

Analytics & Reports

STAKEHOLDERS

Admin

Student

Business

Faculty

STAKEHOLDERS FEATURES

Admin

- End-to-end access and control of the LMS modules.
- Protect sensitive application data.

Business

- Create a custom learning portal.
- Publish public & private courses.
- Promoting courses and obtaining revenue as communicated.

Student

- Type 1: Individual self-registration is available.
- Type 2: Businesses that register their users as students in their courses.

Faculty

- Create online courses on their preferred topics.
- Videos, PowerPoint presentations, PDFs, and live classes can all be uploaded.

HOW DIFFERENT IS EXPLENET

Courses can be categorized as Hybrid and Online.

The term "hybrid" refers to a combination of offline and online components. When a person navigates through courses, they will be able to see the respective catalogue with the option to view batches, and they can enrol for these courses based on the availability of the seat and the enrollment deadline date.

Courses can be categorized as Hybrid and Self learning

TLaboratories can use this platform to become a part of the LMS. Laboratories should have their own login page where they can create their profile. Name, Description, Available Equipment, Days of Operation, and Create Slots are some of the fields that should be included. Individuals and businesses can purchase these time slots and visit the Laboratory.

HOW DIFFERENT IS EXPLENET

Student Performance Analysis

Students will be evaluated based on parameters such as time taken to complete, areas of strength/weakness, and so on, and the results will be published on their dashboard/homepage by the administration/faculty.

Examination Management:

To verify the understanding capabilities of the student, assessments are given by faculties and admins. Upon completion of the assessment, respective evaluations will be made and the results will be published.

Assessments can be created with regard to categories like Aptitude, Technical, and Objective type, and upload materials.
